Selected packaging illustration.

Fresh plaster being worked onto a block wall.

The plastering layer forms part of the selected wall build-up.

Uses and benefits

Wall plastering

Provides the plastering layer for specified block, brick and concrete walls as part of the intended wall build-up.

Premixed supply

The mortar is supplied premixed in a paper-bag format. The selected PL 101 formulation determines its application route and suitability for the intended finish.

Application notes

Suitability depends on the wall material and condition, existing surface treatments, interior or exterior exposure and selected PL 101 formulation. Colour and hand- or machine-application variants are formulation-specific.

Water ratio, mixing, working time, thickness, yield, substrate and bonding preparation, curing and finish readiness are not specified here.

Product overview. The applicable technical and safety data sheets govern application and handling.
